

Seth Brasile

Software Engineering & Business Systems

Durant, OK | seth.brasile@gmail.com
sethbrasile.com | github.com/sethbrasile

Professional Summary

Engineer and technical leader with 12+ years across software, enterprise IT, and business systems. Led a startup's platform and six-person team, automated operations across 2,500–3,200 endpoints, and built payment-device tracking for PCI audits. Direct AI-assisted development with ownership of architecture, review, integration, and acceptance.

Professional Experience

Prickly Pear Marketing Co | Co-Founder & Solutions Engineer

Oct 2025–Present | Durant, OK

- Lead web delivery, automation, internal tooling, and technical standards for a co-owned marketing agency.
- Built AI usage controls, scheduled automation, drift detection, and review and validation controls for AI-produced client work.

Fulcrum Insights | Contract Senior Full Stack Developer

Feb–Jun 2025 | List At Ease project | DevOps & Architecture

- Built Laravel/Vue listing data, Cloudflare R2 image uploads, and agreement/signature handling. The team completed application development.
- Configured Laravel Cloud, GitHub Actions deployments, local Docker infrastructure, and priority-queued email delivery.
- Recommended data models and Laravel packages; the team made architecture decisions collectively.

BetterLife | Lead Software Engineer & Architect

Mar 2023–Present | Remote | Advisory only since mid-2024

- Led the financial wellness startup's founding platform across applications, payments, matching, databases, and deployment. The business became profitable in year one.
- Recruited four hires and led a six-person team including myself. Converted stakeholder requirements into Kanban tasks, assigned work, reviewed code, and managed merges.
- Made stack and architecture decisions; adapted a data scientist's R/Python matching algorithms for production and deployed them using Docker/Dokku and Hetzner.
- Built cross-system synchronization and reporting with Go, PostgreSQL, InfluxDB, and Grafana; implemented Auth0 authentication.
- Migrated to lower-cost commercial software when the business pivoted to individual coaching.

DKBinnovative | Centralized Services Automation Specialist

Jun 2021–Mar 2023 | Frisco, TX

- Built PowerShell and Go automation for security, compliance tracking, updates, and service operations across 2,500–3,200 endpoints in healthcare and manufacturing.
- Led PrintNightmare and Log4Shell response across the client base; implemented remediation against findings supplied by the security team.
- Built a cross-platform remote-management proof of concept using Go, gRPC, and mutual TLS; administered internal infrastructure and evaluated vendor software.

Professional Experience Continued

The Chickasaw Nation | Retail Systems Analyst

Oct 2016–Jun 2021 | Ada, OK

- Served as one of two primary specialists for retail and payment systems across casinos, convenience stores, gas stations, restaurants, and boutique retail.
- Served two years as a PCI-DSS subject-matter expert and lead audit preparer; designed enterprise payment-device inventory and location tracking across hundreds of devices.
- Evaluated hardware and software vendors and led stakeholders through selection, planning, and implementation.

Earlier Software Development & Consulting

2013–2016; 2023–Present

- Greeting Card Collection / Deep Space Robots (Apr 2015–Jul 2016): built JavaScript/Ember applications for customized greeting-card storefronts.
- Koddi (Sep 2014–Apr 2015): PHP/JavaScript development on a travel-analytics and advertising platform.
- Geeked Out (2013–2014): IT services, hardware repair, PHP/JavaScript development, and infrastructure consulting. Continue independent engineering through freelance work and Tenor Creative (founded Sep 2024).

The Chickasaw Nation | IT Client Services & Gaming Operations

2008–2013 | Southern Oklahoma

- Supported 3,000+ users across 28 properties as an IT Client Services Technician (2012–2013), covering workstations, deployments, network troubleshooting, and infrastructure response.
- Managed 75+ support and customer service employees as a Gaming Floor Supervisor (2008–2011), including scheduling, performance management, and discipline.
- Enforced Title 31 and IRS requirements in casino operations; also served as a Gaming Floor Attendant during this tenure.

Selected Projects

Potluck Planner: Conceived and directed an event-coordination SaaS with AI agents doing most implementation. Own architecture, review, integration, and live operations across Next.js, PostgreSQL, Stripe, and Cloudflare.

Cathode Designer: Directed development of a guitar-amplifier simulation application, with Claude Code doing most implementation. Combined circuit simulation and a neural power-stage model, with validation for model accuracy and real-time audio performance.

EZ Web Audio: Author of a TypeScript library that simplifies the Web Audio API. Its predecessor powered interactive audio in Justice For Us, a White House SXSL exhibit to which I contributed engineering work.

Technical Skills

Development: TypeScript, JavaScript, Go, PowerShell, Python, PHP, SQL; Laravel, Vue/Nuxt, Ember, Node.js.

Systems: Docker, GitHub Actions, Laravel Cloud, Cloudflare, PostgreSQL, Grafana; Active Directory, Microsoft 365, Intune, ConnectWise Automate; Auth0 application identity.

Delivery: Architecture, code review, system integration, vendor evaluation, technical leadership, AI-assisted engineering and validation.

Education & Professional Development

Mott Community College: Psychology and music coursework, 2004–2005 (two semesters).

Lapeer County Vocational Technical School: Electronics Engineering coursework, 2001–2002 (one year).

Udemy: Learn to Code with Ruby, September 2024. **Coursera:** Python and data-science coursework, August 2014.
